

We are pleased to share another *wonderful success story from Morning Breeze!*

Name: Janet Redford

Admitting Diagnosis: Surgical Procedure
Complications

Admission Date: 2/8/18

Discharge Date: 2/23/18

Discharge Location: Home

Janet admitted to Morning Breeze following complications from abdominal surgery resulting in a colostomy and wound vac placement.

She participated in physical and occupational therapy services to regain independence with functional tasks. Upon admission, she required minimal assistance with all mobility and activities of daily living completion.

Janet participated with occupational and physical therapy to increase upper body and lower body strength, improve balance, and to decrease assistance with mobility and activities of daily living. The nursing staff also played an integral part of her stay with education on colostomy and wound vac care.

Janet was able to return home with her daughter. She can walk independently and complete activities of daily living on her own.
